TIDBITS® EXPLORES A WORLD OF SCIENCE

by Blue Sullivan

Through their discoveries, research and inventions, scientists from across the globe have made countless improvements to education, medicine, physics, chemistry and many other fields. Learn more about some of the most prominent scientists from around the world.

- One of the most recognized figures in history, German-born Albert Einstein was born with an unyielding curiosity and thirst for knowledge. The Nobel Prize winner is credited with unlocking secrets of the universe, and is perhaps most famous for his Theory of Relativity research.
- Well ahead of his time, Austrian scientist Gregor Mendel mastered genetics and discovered how traits are inherited, though it took 34 years for the science world to recognize his genius. Initially his ideas were written off as ludicrous.
- Sir Isaac Newton, regarded as the pioneer of modern physical science, made many scientific advances in the fields of natural science, mathematics, astronomy, mechanics and chemistry. Credited with discovering the force of gravity, he is still considered by many to be the “greatest and most influential scientist that has ever lived.”

 2 room minimum Dries in 2 hours!

Now here's a tip! by Jo Ann Derson
 (c) 2009 King Features Synd., Inc.

- To clean out your coffee grinder in order to use it for spices, add about a half-cup of white rice, then pulverize it. Repeat until scent is gone and rice powder comes out clean.
- It's food-smart to separate utensils and cutting boards used for veggies, meats, poultry, etc. Here's a handy chef's trick: Color code. Paint a different color stripe down the edge of cutting boards and around the handle of utensils for each variety: green for veggies, yellow for poultry and red for beef.
- Line the bottom of your dog's food dish (underside) with silicone caulk. Use a crisscross pattern in the center. This will keep the dish from sliding around when your pet eats.
- "If you are painting your ceiling and are bothered by drips, try protecting your eyes with an old pair of swimming goggles. They will keep your eyes safe from drips and splatters, and fumes will be much less bothersome." -- E.G. in Virginia
- "I needed a hot water bottle for my legs, but I couldn't find mine anywhere. My husband suggested filling a sodapop bottle (the 2-liter kind) with hot water and wrapping a towel around it. It worked magically, and I think even better than the regular bottle." -- C.C. in Iowa
- Want quick-cooking meatloaf? Use muffin tins to bake cute, easy portions. The same meat mixture will cook in half the time and be just as tasty. Use mashed potatoes to "frost" these dinner "cupcakes"!

Send your tips to Now Here's a Tip, c/o King Features Weekly Service, P.O. Box 536475, Orlando, FL 32853-6475 or e-mail JoAnn at heresatip@yahoo.com.

GO FIGURE! by Linda Thistle

The idea of Go Figure is to arrive at the figures given at the bottom and right-hand columns of the diagram by following the arithmetic signs in the order they are given (that is, from left to right and top to bottom). Use only the numbers below the diagram to complete its blank squares and use each of the nine numbers only once.

A WORLD OF SCIENCE (CONTINUED)

- French chemist and biologist Louis Pasteur is best known for creating the method of pasteurization to keep milk and wine from spoiling in addition to creating vaccines for a number of diseases including rabies. Oddly enough, when Pasteur was in school, his teachers considered him to only be mediocre at chemistry.
- All coffee fanatics have Melitta Bentz to thank. Bentz was a typical German housewife that went on to invent the coffee filter, 300 years after coffee had been discovered. She revolutionized the idea of using paper to filter out the unwanted residues.
- Before he made his contributions to our knowledge about space (as well as creating his many inventions), Italian born Galileo Galilei wanted to be a musician. His father insisted that he go to medical school, yet Galilei never received his degree from the University of Pisa. He did, however, go on to publish "The Starry Messenger," presenting among many other findings that Earth was not the center of the universe.
- Although he might have found proof for the Earth not being the center of the universe, Galilei was not the first to introduce this concept. Mathematician and astronomer Nicholas Copernicus first claimed that the sun was the stationary object that Earth revolved around. His idea was disregarded by most, but he is credited as the initiator of the Scientific Revolution.
- German chemist Robert Bunsen is famous for the Bunsen burner, although he never actually invented the iconic scientific tool; he merely improved it.
- Although most scientists get their start in universities, it is only appropriate that Laszlo Jozsef Biro, inventor of the ball point pen, began as a journalist and editor. His brilliant idea stemmed from his annoyance at writing with a fountain pen.
- Changing forever the music industry, German immigrant Emile Berliner revolutionized sound recording by being the first person to start recording on flat disks or records. He went on to invent the gramophone and records. Did you know that the first records were made of glass long before they switched to plastic?
- Marie Curie, one of the most famous female scientists, is celebrated for her discovery of the mysterious element radium. She completely altered the way scientists thought about matter and energy and paved the way for the treatment of many diseases.

Donna's Day Creative family fun
 by Donna Erickson

Homemade Power Bars Are Energy Snack

Neighborhoods hum and bustle with an extra dose of activity this time of year, and some households, like the Gustafson's, seem to be especially on the go -- make that "on the run," but in a good kind of way. Watching the action from the sidelines, I can't help but be inspired by this fit family. All four kids play hockey, baseball/softball and tennis, and two play soccer. Toss in the parents, and biking trumps driving the car whenever possible. No wonder mom Angie always has her favorite chewy power bar recipe handy for easy reference. She and the kids enjoy making the tasty snack that is chock full of healthy ingredients, including flaxseed, wheat germ and raisins. Reese's Pieces are added to the mix, but she controls the amount. "The original online 'Ultimate Power Bar' recipe, which has been passed from friend to friend, comes from Lunds, our neighborhood market where you can easily find all the ingredients," she says. "But, like most recipes I prepare, I tweak the ingredients to suit our tastes. The bars are ideal for school lunches, picnics and rest stops when we bike around town with our cycling club. I don't know a kid who doesn't like them -- even the picky eaters ask for the energy snack." Make a batch this weekend with your kids and enjoy Angie's version or Lunds' original recipe (see resources below).

ANGIE'S ULTIMATE POWER BAR
 3 1/2 cups oats
 1/2 cup raisins
 1/2 cup shredded coconut
 2/3 cup sunflower seeds
 1/2 cup toasted sesame seeds
 1/2 cup wheat germ
 1/2 cup oat bran
 3 tablespoons flax seeds
 1 tablespoon cinnamon
 1 teaspoon salt
 1 1/2 cups natural peanut butter
 1 cup honey
 4 tablespoons butter, melted
 3/4 cup Reese's Pieces

1. Preheat oven to 350 F.
2. In a large bowl, let one child combine the first 10 ingredients with a big spoon. Continue stirring while another child adds the peanut butter, honey and melted butter. When mixed, stir in Reese's Pieces.
3. Spoon mixture into an ungreased 9- by-13-inch glass pan. Use a spatula to pack and press it down firmly. Bake 15-17 minutes. Let cool, then chill completely before slicing. Store bars in stacks separated by waxed paper in a covered container in the refrigerator. Makes 36 bars. (Find the original "Ultimate Power Bar" recipe at www.lundsandbyerlys.com. Click "recipes" and search "Ultimate Power Bar.")

Strange BUT TRUE

- It was pop art icon Andy Warhol who made the following sage observation: "It's the movies that have really been running things in America since they were invented. They show you what to do, how to do it, when to do it, how to feel about it, and how to look when you feel about it."
- If you were like the average rabbit, you would take 18 naps every day.
- You probably know that the 1939 film "The Wizard of Oz" was based on the book "The Wonderful Wizard of Oz" by L. Frank Baum. You may not realize, though, that Baum wrote a total of 14 Oz books between 1900 and 1920. The series continued even after the author's death; Ruth Plumly Thompson produced one Oz book every year between 1921 and 1939.

A WORLD OF SCIENCE (CONTINUED)

- Glorified for his work with atomic theory, England native John Dalton achieved his findings due to his high interest in meteorology. He kept weather records until his death and published a book titled "Meteorological Observations." He later went on to explain his conclusions about atoms in "New System of Chemical Philosophy."
- Scottish scientist James Watt was considered a "delicate" child and spent a great deal of his childhood homeschooled by his mother and was considered slow in many academic areas — except for math. Watt eventually invented the steam engine, and after Parliament granted him a patent that prevented anyone else from making a similar machine, Watt went on to control a steam engine dynasty.
- Known as the Father of Geometry, ancient Greek Mathematician Euclid published his ideas in "The Elements," and his teachings influenced Western mathematics for more than 2,000 years. Since it is estimated that he lived from 325 BC-265 BC, little is known about his life.
- Born into a prominent family of wealth, Italian scientist Amedeo Avogadro followed in his family's footsteps to practice law but couldn't shake his interest in the natural sciences. He studied physics and math in private for years before he published his hypothesis about molecules that was eventually labeled Avogadro's Law.
- Immensely famous for his printing press, Johannes Gutenberg began as a goldsmith and businessman before making his contributions as a scientist and inventor. Gutenberg forever altered the method and speed by which books were distributed to the public.
- German physicist Wilhelm Rontgen is known for discovering X-rays and received great recognition for his findings, including streets named in his honor, countless awards and the Nobel Prize in Physics.
- German physician and bacteriologist Robert Koch made a discovery that changed medicine forever: All diseases were not caused by bad air but instead by bacteria. He was able to find the causes of such deadly diseases of tuberculosis, cholera and the cycle of anthrax. Koch won the Nobel Prize for Medicine in 1905.

- Those who study such things say that wine was being drunk more than 7,000 years ago, in ancient Sumeria.
 - When the Coca-Cola Company first started marketing its product in China, the advertisements used Chinese symbols to spell out the brand's name phonetically. It was only after the ads had been published that the marketers learned that those symbols spelled out the phrase "bite the wax tadpole."
 - The manufacture of a single domestic automobile requires the use of a whopping 39,000 gallons of water.
 - Every year, about 10 percent of the world's population visits a zoo. In the United States, though, about half of us make such a visit annually.
 - Most people have about 100,000 hairs on their head. It's not clear why, but redheads tend to have somewhat fewer hairs -- about 90,000 -- while blondes have more.
- Thought for the Day:** "I'm willing to admit that I may not always be right, but I'm never wrong." -- Samuel Goldwyn

What IS That?

"Dream Mine" located east of Salem, Utah

In Aug 1894, John H. Koyle experienced a dream in which he was visited by a figure from another world. The visitor showed Koyle an ancient "Nephite" mine. The rooms contained treasure of an extinct civilization. Koyle was instructed to open a mine and extract gold for the welfare of "his" people. Specific instructions were given for the mine development. The riches would be found and released during a time of world crisis. The name "Relief Mine" was attached to the project. In 1909 the Koyle Mining Company was formed with 114,000 shares of stock issued at \$1.00 per share.

Koyle's dreams continued. He predicted the First World War and the economic crash of October, 1929. He foresaw "horseless carriages" bigger than railroad cars going down the road at great speeds. John H. Koyle died 17 May 1949 in Payson.

The mine continued in fits and starts under the leadership of Quayle Dixon for another twenty-three years. In 1961, a new company, The Relief Mine Company, succeeded the Koyle Mining Company.

Info from "The Dream Mine", Jay M. Haymond
<http://www.media.utah.edu/UHE/d/DREAMMINE.html>
 To learn more about the "Dream Mine", read "Relief Mine" & "Relief Mine II" by Ogden Kraut and "The Dream Mine Story" by Norman Pierce

A WORLD OF SCIENCE (CONTINUED)

Although he was expected to enter the medical field, Frederick Sanger's interest in nature and science was too strong. Because of his work with proteins and DNA, Sanger won two Nobel Prizes in Chemistry, one in 1958 and one in 1980. He was the first person to find a protein sequence.

FAMOUS LANDMARKS OF THE WORLD: A GOLDEN GATE

Spanning across the Golden Gate Strait in the San Francisco Bay area, the Golden Gate Bridge is still one of the most beautiful bridges in the world.

- After four years of construction that began in 1933, The Golden Gate Bridge was opened to the public on May 28, 1937. With its total cost of 35 million dollars, the bridge was completed under budget and ahead of schedule.
- The 1.7-mile-long bridge links San Francisco with Marin County.
- The chief engineer was Joseph Strauss, who faced immense opposition in the project's beginning stages.
- Construction was deemed nearly impossible because of the harsh working conditions surrounding the Golden Gate Strait, including swift currents, strong winds that reached up to 60 mph and deep water. Construction also began during the Great Depression.
- It is estimated that around nine million people from around the world visit the Golden Gate Bridge each year.
- Upon its completion, The Golden Gate Bridge had the longest suspension span in the world, 4,200 feet. This record held until the Verrazano Narrows Bridge was constructed in New York City in 1964. Today, the Akashi-Kaikyo Bridge in Japan has the longest span.
- The two towers each rise 746 feet in the air above the water and 500 feet above the roadway. There are 600,000 rivets in each tower.
- The bridge has five lanes and charges a \$6 cash toll on the south entrance. The toll was 50 cents one-way and \$1 round trip on opening day.
- On opening day, The San Francisco Chronicle referred to the bridge as a 35 million dollar steel harp.
- The Golden Gate Bridge is painted a distinctive orange color, called "International Orange," not only because it increases visibility for passing ships, but also to serve as an appealing contrast to the cool colors of the ocean and sky. Sherwin Williams currently provides the orange paint.
- Painting The Golden Gate Bridge is an on-going task; it protects the bridge from the high salt content in the air that causes rust and corrosion.
- Today, the bridge weighs a total of 887,000 tons, less than its original weight of 894,500 tons as a result of new decking material.

Waldorf Bridal Party Salad

More weddings are performed in June than in any other month. And why not, June is just about the most perfect month of the year. The flowers are in full bloom, and the weather is both warm and sunny. So with everything so ideal, let's toast the bride with a perfectly delightful bridal luncheon -- featuring this recipe.

3 cups (6 small) cored, unpeeled and chopped Red Delicious apples
 1 cup seedless green grapes
 1/2 cup miniature marshmallows
 1/4 cup chopped walnuts
 1/3 cup fat-free mayonnaise
 3/4 reduced-calorie whipped topping

- In a large bowl, combine apples, grapes, marshmallows and walnuts. Stir in mayonnaise. Add whipped topping. Mix gently to combine.
- Cover and refrigerate for at least 30 minutes. Gently stir again just before serving. Serves 8 (1/2 cup each).

• Each serving equals: 90 calories, 2g fat, 1g protein, 17g carb., 85mg sodium, 1g fiber; Diabetic Exchanges: 1 Fruit, 1/2 Fat.

DEAR PAW'S CORNER: Recently, my cat "Clark Gable" got very ill -- vomiting frequently and lethargic. I had no idea what was wrong, so I called my veterinarian. The vet's assistant talked me through some important steps that I didn't know and wouldn't have been able to accomplish in my panicked state, such as looking at what C.G. was vomiting up and looking for possible sources of poisoning in my apartment. She advised me to bring him in immediately along with a sample of the vomit (gross, right?) and a couple of possible items he could have eaten. The vet was able to quickly treat C.G., who has made a complete recovery. But I've become much more aware that I need to learn when my cat is in distress and how to prevent him getting into dangerous things -- like the houseplant leaves he ingested. I hope you'll remind readers to educate themselves as well. -- Clarence in Cincinnati

DEAR CLARENCE: Your story is more common than you'd think. Thanks for sharing it. If you have a pet, it's very important to know that many household items can be dangerous if your pet ingests them. For example, many cats love to chew on the leaves of houseplants -- but many houseplants are extremely poisonous to cats, especially plants from the lily family. Other seemingly benign things, like chocolate and onions, can be harmful to pets, especially dogs. Even armed with the knowledge of what can harm your pet, accidents can happen. For example, a dog can break into the pantry and eat a giant bag of dog food. Make sure to display the phone number of your pet's veterinarian and the nearest emergency pet hospital near the telephone or on the refrigerator where you can access it should your pet ever be injured, ill or in distress.

Send your questions or comments to ask@pawscorner.com, or write to Paw's Corner, c/o King Features Weekly Service, P.O. Box 536475, Orlando, FL 32853-6475. For more pet care-related advice and information, visit www.pawscorner.com.

A GOLDEN GATE (CONTINUED)

- Twelve workers lost their lives during the bridge's construction, way under the estimated 35. This was due in large part to the safety regulations instituted by Joseph Strauss, including hard hats, daily sobriety tests and a large safety net. This net saved the lives of 19 men.
- Before the bridge's construction, the only way to get across the San Francisco Bay was by ferry. The bay became flooded with ferries by the 20th century.
- The Golden Gate Bridge can be crossed by automobile, bike or foot. There are many tours available.
- Illuminated with 128 lights, the bridge is a spectacular sight at night. Some of the most famous viewing destinations are South Vista Point (the most popular), North Vista Point, Land's End, Baker Beach and Conzelman Road.
- On May 26-27, The Golden Gate Bridge will celebrate its 75th anniversary with The Golden Gate Festival, which will include music, dance, entertainment, arts and exhibits.

UNITED STATES OF SCIENCE

The United States has been home to a great deal of renowned scientists over the years, each offering their own unique expertise and contributions to society. Below are some of the most famous American scientists and their accomplishments.

- Perhaps one of the most famous American scientists and inventors, Benjamin Franklin is credited with discovering electricity, and his inventions include the bifocal lens, lightning rod, carriage odometer and more.
- A brilliant scientist and businessman, Thomas Edison is best known for inventing the electric light bulb. Other inventions include the motion picture camera and phonograph.
- Research chemist Percy Lavon Julian was a pioneer in the medical field for his work with medicinal drugs synthesized from plants and for producing hormones such as testosterone and progesterone from plant sterols.
- Most famous for concocting the recipe for peanut butter, George Washington Carver had a fruitful career in improving and/or inventing products such as axle grease, instant coffee, adhesives, buttermilk, bleach, metal polish, plastic and more.

UNITED STATES OF SCIENCE (CONTINUED)

- Portland, Oregon, native Linus Pauling was an expert in molecular structure and chemical bonds. He has authored more than 350 publications in his field and was named the Humanist of the Year in 1961. He was awarded the Nobel Peace Prize in 1963.
- Famous for his contributions to the space program, Carl Sagan served as an advisor for NASA and solved many space exploration mysteries surrounding planets including Venus and Mars in addition to briefing astronauts before they journeyed to the moon.
- Sagan received numerous NASA awards including the Exceptional Scientific Achievement Award, Apollo Achievement Award and Distinguished Public Service Award. He also authored numerous best sellers and was awarded the Pulitzer Prize.
- American rocketry pioneer Robert Goddard, considered the father of modern rocket propulsion, built the first rocket to use liquid fuel. It wasn't until 14 years after he died in 1945 that he was awarded a gold medal by Congress. It is said that his first thoughts of rockets came to him while pruning cherry trees as a boy.
- Nobel Prize winner Barbara McClintock is one of the most famous American female scientists in the world. She is most recognized for her work and discoveries with chromosomes and genes. She was the first woman to win an unshared Nobel Prize, which she was awarded in 1983 in Physiology or Medicine.
- Mesmerized by the stars as a young boy, Clyde Tombaugh first decided to build a telescope because he was dissatisfied with the one he owned. Although he built more than 30 telescopes in his lifetime, Tombaugh is most famous for discovering Pluto.
- Although Clyde Tombaugh is credited with discovering Pluto, Astronomer Percival Lowell paved the way for him. Lowell predicted the existence of a planet beyond the orbit of Neptune. He's also received recognition for his extensive studies on Mars and Uranus.
- Before he became a world-class astronomer and mathematician, Benjamin Banneker's first great feat was building the first striking wooden clock made completely in America. After teaching himself astronomy and advanced math, he went on to publish his almanac, which became an instant best seller.
